

CG Oncology

Imagining a World Without Bladder Cancer

At CG Oncology, we see a world where urologic cancer patients can benefit from our innovative immunotherapies to live with dignity and have an enhanced quality of life. We are a late-stage clinical biopharmaceutical company comprised of more than 130 employees focused on developing and commercializing a potential backbone bladder-sparing therapeutic for patients afflicted with bladder cancer.

Committed to Bringing Forward a Novel and Innovative Bladder Cancer Treatment

Our lead candidate, cretostimogene grenadenorepvec, is an investigational, intravesically delivered oncolytic immunotherapy in development for the treatment of Non-Muscle Invasive Bladder Cancer (NMIBC). Cretostimogene has a dual mechanism of action that selectively replicates in and lyses cancer cells while simultaneously amplifying the immune response against bladder tumors. Cretostimogene monotherapy received FDA Fast Track and Breakthrough Therapy Designations in high-risk BCG-Unresponsive, NMIBC patients with carcinoma in situ (CIS) late in 2023.
